

Immunisation Statement

Aims

As a Healthy Early Years London setting, we want to ensure that we promote the health and well-being of the whole setting, community through encouraging parents/carers to immunise children and by providing consistent messages to children, parents/carers and staff.

We are aware of the importance of immunisation

Immunisation is the safest way of protecting children against serious diseases. Some diseases can kill children or cause lasting damage to their health. Immunisation prepares children's bodies to fight off diseases if they come into contact with them.

We are aware that there has recently been a drop in the number of children being immunised which has caused outbreaks of some diseases. The low uptake of childhood immunisation has led to more children suffering from vaccine preventable diseases such as measles, mumps, whooping cough and polio.

We promote positive messages about immunisation and encourage parents/carers to fully immunise their children

We confidently approach parents and carers about children's immunisation status. If a child is not immunised, we encourage parents or carers to go to their GP or talk to their health visitor to find out more about immunisations. There is also information available for parents and carers, including information on what immunisations are given and when

www.nhs.uk/conditions/vaccinations/Pages/childhood-vaccination-schedule.aspx .

We put up posters on the benefits of Immunisations on the Nursery notice board and also signpost them to the Children's centre attached to the school for more information on immunisation. Parents are also encouraged to provide travel immunisation to children if they're travelling to countries which have life threatening diseases e.g. malaria, typhoid etc.

We are confident to share key messages to parents and carers about immunisation, such as:

- immunisations save lives
- it is important to make sure babies are protected as early as possible
- it is never too late to have a child immunised even if a child has missed an immunisation and is older than the recommended ages
- Vaccines are quick, safe and extremely effective. It is common for children to have some redness, a rash or swelling where the needle goes in, this should only last about a day
- the Measles, Mumps and Rubella (MMR) vaccine does not cause autism
- When a child is immunised it helps to protect the whole community, this is important because some children with medical conditions or allergies cannot have certain vaccines.

We also offer information and advice for parents and carers in preparing children for vaccination injections.

We have a procedure in place for checking and recording children's immunisation status

We understand that it is very important to maintain and keep an up to date record of children's immunisation status. Some children under our/my care may be at a higher risk of exposure to infectious diseases due to contact with more children and adults than children at home. Keeping a current record of all children's immunisation status helps us to quickly identify which parents/carers need to be informed if there is an outbreak of a specific disease Children are invited for two- and three-year checks at the Children's centre that is attached to the school. A member of the school nursery is present to take relevant information from parents and also check the Red book to see if all

MAYOR OF LONDON

Kenmore Park Infant & Nursery School

the immunisations are up to date. Parents are guided to talk to the health visitor or their GP if the child has missed an immunisation.
